

Fixed Casework

Corilam's line of Institutional Casework is designed to be both durable and attractive. Careful design and quality construction create units to meet your specific storage requirements.

Construction Features

Materials: We only use industrial grade substrates surfaced on both sides with thermofused melamine and high pressure laminates applied to either particleboard, MDF or plywood substrates with a water based adhesive.

Hardware: Standard door hinges are 100 degree, European style hinge. 270 degree knuckle hinge is available. Drawer options consist of melamine, vinyl wrapped or an integrated drawer system with epoxy coated steel drawer slides. A variety of drawer/door pulls are available.

Case Construction: All cabinet sides and bottoms are 3/4" thick panels branded with either matching .020 pvc or matching laminate. Joints are glued with hardwood dowels and metal fasteners. Back panels are 3/4" thick. Adjustable shelves are 3/4" or 1" thick depending on length of shelf. Shelf support holes are bored on 32mm increments. Base Cabinets are available with either a laminated plywood plinth base (for use with plastic cove base) or an integrated base (for a matching finish).

Doors and Drawer Fronts: Standard fronts include 3mm PVC edgebanding. Postformed and thermofoil laminated fronts are available. All PVC banding is machine applied using a moisture-curing hot melt polyurethane adhesive containing no VOC's.
